

**Riparian Unit and Shoreline Assessment Data Form**

Shoreline/ Riparian Unit ID: EP-3 CCP-3 Date: 5/4/17  
 Coordinates- Start: Obtain from GIS Coordinates- End: \_\_\_\_\_ Surveyor(s): RB, MG, LF  
 Unit Length: \_\_\_\_\_ Assessment Method: Visual inspection  
 Reaches within Unit: None  
 Additional Features within Unit: EP-LE-3A CCP-LE-3A

**VEGETATION**

Community Type (Source): Riverine (CWHR)

Dominate Over-Story (Species/% Cover)	Dom. Mid-Strata (Species/% Cover)	Dom. Under-Story (Species/% Cover)
	Sandbar willow 5% - 7%	NNAG 5%
	Mulefat 1%	
	Tamarisk >1%	

**HYDROLOGY**

Description of Hydrologic Regime: At edge of basin - lacustrine fringe.

**LANDSCAPE**

Description of geomorphic regime (erosion processes, upland condition, substrate, etc): Silty buildup at edge of basin, impounded by 45% concrete bank -> upland flat. Drier areas of silt cracking.

**OTHER INFORMATION**

Unit Assessment Rational: Unit consists of w bank of basin N. of elderberry forebay - silty buildup consistent w/ conditions at edges of basin, though this bank is bordered by concrete slope up to road level. - more freshwater emergent vegetation along this bank

Additional Notes: Along basin shoreline, some freshwater emergent vegetation, higher areas of silt buildup, adjacent to concrete bank -> NNAG; upland at road level consists of sage scrub
